

IN THE ABSTRACT:

Please amend the Abstract of the Disclosure as follows.

~~The invention provides a~~ A combined building air-conditioning unit and NBC protection system, containing an enclosed space housing a building air-conditioning unit and further including a plurality of chambers, a first chamber having an ambient air inlet port, one prefilter and a blower for sucking air through the prefilter, a second chamber having a valve ~~means~~ including an open and closed state, receiving air from the blower and accommodating a C-detector and a valve ~~means~~ actuator responsible, at least indirectly to, and operable by, the C-detector, and a third chamber housing at least one C-filter and a blower for sucking air from the second chamber via the C-filter into the building when the valve ~~means~~ is in its closed state. A method for economically controlling air purity within a protected space is also provided.
